DESCRIPTION

The Manzini TE30 Single Turbo Passer is an industrial machine designed for the processing of fruit and vegetables, especially in the food industry. Its main function is the separation of pulp and seeds by means of a centrifugal refining system, allowing to obtain products such as purees, sauces and concentrates with a homogeneous texture and without impurities.

Characteristics:

- Refining system: It uses a high speed rotor that forces the product through interchangeable sieves, allowing the fineness of the final product to be adjusted according to specific needs.
- Versatility: Suitable for a wide range of products, including tomatoes, stone fruits, berries and other vegetables, adapting to different production processes.
- Efficiency: Designed for continuous operation, ensuring high productivity with minimal maintenance.

Hygiene: Stainless steel construction and accessible design for easy cleaning and compliance with food hygiene standards.

- Output may vary depending on the product.
