Exenso - GMF

Wireless-Caliper

Reliable measurement of glazing beds for windows and doors

With his extremely light design and his easy but confident lengthening possibility, is a GMF caliper a real glazing beds expert. Good in the handling, fast and certainly in the service. The high measuring exactness allows a reliable application in the aluminium window industry.

A robust aluminium measuring rail with a measuring area of 1.500 mm, is ideal for measurement of the glazing beds in the casements. By his exactness from $\pm 0,1$ mm sustain the GMF even to the high exactness standards of manufacturing aluminium windows.

Area of application

For the application on the doors and big casements, the GMF caliper can be extended certainly and quickly mechanically up to a measuring length of 2,500 mm. GMF caliper forms the ideal supplement to the length stop "Exenso Comfort", which has proved itself for many years in the window industry.

Functions/features of performance

With the control of this automatic length stop can be cached up to 20 dimensions. The stored measurements can be then continuously transferred from the memory directly to the length stop.

The data can be also optionally transferred to the PC.

Standard length 1,5 m with optional extension to 2,5 m

Exactness is $\pm 0,1$ mm
