### DESCRIPTION

The Parallel Slicer 780/13-FLUMES model from Dutch TecSource (DTS) is a high-capacity slicer designed specifically for slicing mushrooms on industrial processing lines.

#### Model Specifications:

- **Cutting Width (780):** The number '780' refers to the machine's working width (780 mm), which allows large volumes of product to be processed simultaneously.
- **Number of Channels (13):** It features 13 parallel feed channels. These channels guide the mushrooms individually towards the blades, ensuring the product maintains its orientation to produce perfect 'T'-shaped slices.
- **FLUMES System (Water Conveyance):** The term 'FLUMES' indicates that the product is fed or discharged via water channels. This system is ideal for:
  - **Gentle transport:** Prevents physical damage to the mushrooms.
  - **Continuous cleaning:** Helps remove impurities during transport to the cutting head.
  - **Integration:** Fits perfectly into lines that use chillers or immersion washing systems.

- Production may vary depending on the cutting format and product.

Tray vibrator: 1.40 m x 0.78 m.

Tank: 1.80 m x 0.98 m x 0.57 m. Capacity: 1,000 L.
