

**Firetex - a reliable partner
for sustainable operations**

Modular biomass boiler house

**Firetex offers Latvian made modular boiler houses - the
safe heating solution for your facility.**

Areas of use: industrial facilities, construction sites, buildings under reconstruction, as well as emergency and stand-by heat sources.

The advantages of our Modular Boiler House:

- Fast delivery and start-up
- Can be connected to an existing heating system
- Possibility to provide hot water
- Energy efficient solutions and system components
- Fuel storage inside the heating module
- Possibility to equip the heating module with a fire extinguishing system
- No need for specially equipped rooms
- Class 5 biomass (pellet) boiler
- Autonomous operation and remote control
- Possibility of continuous operation in case of external power failure (if required)

Customers can choose a different type of fuel.

Other modular equipment: diesel generator stations, modular cogeneration plants, water treatment and purification plants, mobile workshops and special equipment, modular steam generator sets.

Individual approach to each client's wishes and needs.

Certified and high quality equipment manufactured in Latvia.

A professional team ensures the complete design and production cycle, as well as the assembly of modules and equipment on site, ensuring continuous operation, maintenance and monitoring.
