ProfiFeed Technologies, founded in 2015, is a Euro-Australian industrial technology business with focus on **software-imagined circular saw automation**.

With products in 100+ countries around the World, we design and make both simple and high-performance cutting automation **solutions to supercharge your production**, whether you are a one-person business or a large manufacturing enterprise.

 CE machine design with high safety

 EUR1 free trade certificate on all products

 Made in Serbia - Worldwide Distribution

ProfiStop Omicron is a heavy-duty solution for high-productivity cutting of heavy steel or timber. Run your heavy-materials production with precision and accuracy of a Swiss watch.

Simple to use | An intuitive, plug-and-play saw automation solution.

High accuracy | Advanced positioning control system with a lifetime accuracy guarantee.

High-value management | An effective cutting management solution, making cumbersome jobbing processes a breeze.

- Fully automated servo motor cut lengths measuring
- Simple to use high-accuracy heavy materials cutting
- Heavy duty 120+ kg recommended material weight
- Ideal for hardwood timber and structural steel
- Automated and streamlined jobs management
- Label printing and bar-code / QR jobs input (optional)
- Jobbing integration to your ERP system (optional)

Ideal For

- Structural steel and fabrication
- Frame and truss manufacture
- Agricultural manufacture
- Solid timber processing
- Retail material sales

Can be used with all your existing saws including:

- Band saws
- Industrial drop saws
- Guarded up-cut saws
- Radial arm saws
- Drills and presses

Your ProfiStop Omicron can come with one of our two user / data interface options:

Basic Software

Simple, num-pad style interface with enter-the-length and go-to-position functions. It is just a no-frills, simple-to-use machine which you can intuitively start to use in seconds. Suitable for use with your existing printed cut lists, where you get the benefit of automating the saw measuring but continue to manage all your production data the same way you do now.

Optimiser Software

An advanced user and data interface designed for importing your cut lists remotely (over WIFI) and the machine optimising your cut lists for cutting so that the waste material of your production is minimal. Optimisation step being done at the machine is a key process improvement as it eliminates the need to make complicated layouts which your operator must follow in exact order. You can very easily optimise and cut any material you have lying around including your offcuts without needing to have any management system for them. For businesses who want to streamline their production using IT and advanced data functions.

ProfiStop Optimiser Jobbing

For every piece of material you place down to cut, no matter what length, a laser sensor can measure its length. Our powerful optimisation algorithm then takes your cut list and calculates the best order of parts to cut from this material so that wastage is minimised.

Optimiser Jobbing

- |||| Total Parts: 72
- Material required: 144 m
- Material waste: 2.1%
- 🕒 Cutting time: 22 mins

FIFO Jobbing

- |||| Total Parts: 72
- Material required: 180 m
- Material waste: 21.7%
- 🕒 Cutting time: 43 mins

Save \$\$

You spend a lot on material and chances are it is the biggest expense in your production. An optimiser run production will result in significant material cost savings in comparison to typical first-in cutting.

Powerful algorithm

Our inline optimiser with a cut list containing a mix of long and short parts will produce 99%+ yield most of the runs, even with cut lists containing not many individual parts.

Zero hassle optimisation

No need to run any optimiser from the office, print dozens of pages, or pay attention to putting the profiles in the "right" order. Just send the Excel cut list to the machine, and put in your material to cut, of any length, in any order.

Use up offcuts easily

No more measuring and recording your offcuts for the office. Just return them into stock, and put them through the machine at the start of the next job.

Get something for nothing

Your material typically comes with extra 20-60 mm on each length you buy. With inline optimiser, this will automatically be used up to produce your parts, and without you needing to do any extra work.

Optimise ad-hoc cut lists

Our system allows you to optimise both complex Excel-prepared cut lists, as well as ad-hoc cut lists you just think up, easily and quickly.

Signs You Need ProfiStop Automation

- Are you so busy you have to decline work?
- Do you have two, three or five saws in your production?
- Do you find parts don't fit right on-site?
- Is your best worker occupied with cutting?
- Do you have large, complex projects with strict delivery times?
- Are you constantly working in your production but projects still come together slow?
- Do you feel your production work is like doing chores?
- Do you have a junior employee tasked with cutting out parts from offcuts?
- Do you have many productivity ideas but no time to progress them?
- Are you burned out trying to juggle many things?
- Are you constantly busy, but struggling to progress profits?

Why ProfiStop Automation?

Exceptional ROI

Most users find that their automated ProfiStop® machines pay for themselves in under a year.

High accuracy and productivity

Our machines are high-productivity automation solutions for cutting, producing the parts you need consistently, and every time.

IT focussed production

In 2023 manufacturing is about data. Our machines are designed around IT and process solutions to supercharge your productivity far beyond mechanical automation.

Industry leading support

Our technical support is regularly rated the best in the business by our Customers. We are available to assist you no matter where in the World you are 24/7.

Unmatched expertise

We can assist you with any problem effectively and in minutes. Our IT and machine expertise is high because Engineers you speak to are the same people that design and build your machines.

Get more done, with less

ProfiStop automation is the key step in transformation of your production foundations from labour reliant, to productivity based.

Big picture focus

We make the World where your people produce like machines, without working like machines.

“

We spent a significant amount of time investigating options for creating automated cutting where we could export cutting sheets from our BIM software. Most of the options fell short as far too complicated or too simplistic. That was until we found Profistop. It allows us to export cutting sheets direct to the machine, optimise the material, and create automatic labels. Profistop software productivity capabilities we were looking for were matched only by one other machine which was a \$350,000 CNC centre.
