DESCRIPTION

Centrifugal slicer suitable for slicing and grating carrots, potatoes, turnips, etc. Thanks to the different types of sheets used, it is possible to cut into filaments (with 'V' or oval profile), in strips and cut into very thin and uniform slices (smooth or wavy cut) a very wide range of products. The centrifugal action produced by the rotor ensures the exact placement of the product against the different sheets arranged along the circular cutting head.

* Production will depend on the cutting size and product to be cut.
