

GALICO AUCTION GROUP S.L.

HP Jet Fusion 3D 4200

Multi Jet Fusion system, 2017. Printer, Processing Station and two build units. From a service bureau that has now closed.

Location	Albacete, Spain
Terms	EXW Albacete. Buyer arranges freight and customs
Availability	Immediate. Inspection by appointment
Our reference	LOTE2-HP
Prepared	21 August 2026

Before the details

Everything in this document comes off the machine itself: the data plates on all three units, and the Printer Information screen. Anything we could not verify has been left out.

The usage figures are read from the machine. 445,886 minutes of print time, which is approximately 7,431 hours, across 718 jobs. 2,800,493 layers and 1,308 litres of printed volume. The screen is photographed later in this document.

It is a complete system with two build units. Printer, Processing Station and two build units, each with its serial number listed and photographed. Extraction and external powder collection are in place, and there is PA12 powder in stock.

The service position is set out in full further on. The HP service contract has expired and the machine has been standing since July 2025. The price is set with those facts in mind.

What the system consists of

Printer	HP Jet Fusion 3D 4200 · S/N SG74S34001 · P/N M0P44B · built 4 May 2017
Processing Station	HP Jet Fusion 3D Processing Station, powder processing
Build unit 1	S/N SG74C35005 · P/N M0P45B · built 4 May 2017 · Made in Singapore
Build unit 2	S/N SG74R35003 · P/N M0P45B · built 27 April 2017 · Made in Singapore
Extraction	Extraction system and external powder collection container in place
Material	HP 3D High Reusability PA12 in stock, part factory sealed

Usage data

Read directly from the machine's Printer Information screen.

Print time	445,886 minutes · approximately 7,431 hours
Jobs	718 total, 590 completed successfully
Layers printed	2,800,493
Volume printed	1,308 litres
Fusing lamp calibration	Valid
Material run	HP 3D High Reusability PA12
Last job on record	1 July 2025
Session ID	911

Technical data

Manufacturer	HP
Model	Jet Fusion 3D 4200
Year	2017
Technology	Multi Jet Fusion (MJF), powder bed
Printer supply	9 kW · 220-240 / 380-415 V · 30 A · 3W+N+PE
Build unit supply	3 kW · 200-240 V · 16 A · single phase
Approvals	UL listed E165854, CE, FCC Part 15, EAC
Printer dimensions	2,210 × 1,238 × 1,448 mm

Service position

Set out in full so it can be priced properly from the start.

- **The HP service contract has expired. The buyer will need to arrange service, and recertification where HP requires it on relocation or change of ownership. That cost sits outside our price and is worth budgeting for.**
- The machine has been standing since July 2025. We cannot warrant printhead condition after that period, and it would be sensible to plan on replacing them.
- The agent cartridges are down to 0.2 cc fusing and 0.2 cc detailing. The intermediate tanks hold approximately 1,470 cc and 1,142 cc respectively.
- HP discontinued this model in October 2024, with supplies and support committed through October 2029.
- The printer runs on 380-415 V three phase. An installation outside that supply range will need a transformer.

Against that, the fusing lamp calibration is valid, the system is complete with two build units, and the recorded print time is 7,431 hours.

Available on request

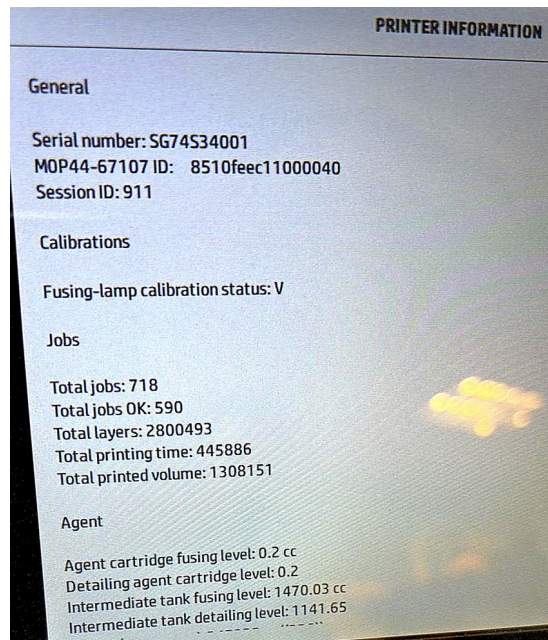

We will check and confirm any of the following:

- Printhead count and condition
- Number of fusing and heating lamps, and any spares
- Kilograms of PA12 powder on site

- Total weight of the printer, and the printer's country of manufacture

Printer, Processing Station and external powder collection, in place.

Printer Information: 7,431 print hours, 718 jobs, fusing lamp calibration valid.

Printer plate: S/N SG74S34001, P/N MOP44B, built 4 May 2017.

Build unit 1: S/N SG74C35005, built 4 May 2017.

Build unit 2: S/N SG74R35003, built 27 April 2017.

Processing Station.

Practical matters

Terms

- Sold EXW Albacete. The buyer arranges freight, insurance and clearance. We handle loading, machine documentation and export paperwork at this end.
- Delivered pricing can be quoted on request — just name the destination.
- Inspection is available by appointment.
- The system is offered complete, though we are open to discussing another arrangement.

We can also send

- Full resolution photographs of all three data plates and the Printer Information screen
- Further photographs of the Processing Station interior and the extraction installation
