DESCRIPTION

The breading machine is movable with wheels, brake and adjustable height:

*It is suitable for breading a wide variety of products.

*The breadcrumbs that can be used in this machine are the standard type.

*Width of the belt : 80 cm

*The conveyor belt is made in stainless steel belt.

The machine's conveyor belt takes the product through the breadcrumbs area, covering the bottom and top of the product with a layer of breadcrumbs.

The maximum production capacity depends on the speed of the belt, type and dimensions of the product.
