

Used ROBINO & GALANDRINO monostadio z 8 t capsuling machine- Year 2002

Machine type:	Capsuling machine
Ref:	CA83
Model:	Z 8 T
Year:	2002
Condition:	In Storage
Containers:	Glass
Products:	Wine (Sparkling), Wine (Still)

Technical details

No. of heads:	8	Capsule type:	["PVC shrinkable plastic", "Champagne/sparkling wine"]
Optical Centering system:	No	Rotation direction:	Counterclockwise
Capsules stock:	Standard	Safety features:	Yes
Manuals:	No		

Description

Used ROBINO & GALANDRINO monostadio z 8 t capsuling machine- Year 2002

Technical Specifications & Performance Data

This Single-stage Capsuling Machine Z 8 T by Robino & Galandrino is a robust solution for capsule application on glass bottles, engineered for wine and sparkling wine producers seeking reliable performance in a second hand, used bottling line environment. Built with Italian precision, it offers consistent capsuling quality and seamless integration into industrial packaging and beverage production workflows.

- **Manufacturer:** Robino & Galandrino
- **Model:** Z 8 T (Monostadio)
- **Year:** 2002
- **Configuration:** Single-stage capsuling
- **No. of heads:** 8

- **Capsule types:** PVC shrinkable plastic; Champagne/sparkling wine
- **Rotation direction:** Counterclockwise
- **Optical centering:** Not equipped
- **Containers:** Glass bottles
- **Compliance:** CE marked

Advanced Automation & Control Systems

Designed for dependable operation within professional bottling equipment setups, this capsuling machine supports stable, repeatable processes. Its single-stage architecture simplifies adjustments and minimizes changeover time. Operator functions are straightforward, ensuring efficient routine operations. Standard machine protections and CE conformity support safe use on modern production floors.

- Streamlined controls for routine start/stop and adjustments
- Quick changeovers aligned with single-stage design
- Mechanical alignment without optical centering for robust, low-maintenance operation
- Safety guarding consistent with CE conformity

Production Line Integration Capabilities

The Z 8 T integrates easily as a standalone station or inline within a complete used bottling line. It accepts upstream glass bottle handling and passes consistently capped bottles downstream to labeling or inspection modules, supporting flexible industrial packaging layouts.

- Inline or standalone operation
- Compatible with standard glass wine bottle handling conveyors
- Suitable for integration after corking/capping and before labeling
- Capsule application for both PVC shrink and sparkling wine formats

Machine Condition & Maintenance History

This machine is currently in storage, making it available for rapid deployment into beverage production environments after routine commissioning. The overall configuration, CE conformity, and preserved components provide a solid foundation for reliable second hand operation.

- Current status: In storage
- CE marked unit
- Single-stage, 8-head layout preserved

Operational Performance & Versatility

Optimized for wine sector applications, the Z 8 T manages both PVC shrink capsules and champagne/sparkling wine formats. Its counterclockwise carousel and 8-head configuration deliver balanced throughput for small to mid-scale wineries and beverage producers.

- Ideal for Wine and sparkling wine production
- Consistent application of PVC shrink capsules
- Capability for sparkling wine capsule formats
- Designed for glass bottle processing

Installation Requirements & Site Preparation

Installation involves standard mechanical positioning, conveyor alignment, and utility connections consistent with capsuling equipment in industrial packaging plants. A compact footprint and single-stage simplicity reduce integration complexity.

- Requires standard electrical supply per capsuling machinery norms
- Mechanical alignment with existing conveyors
- Accessible perimeter for operation and maintenance

Safety Standards & Compliance Certification

Built in accordance with European machinery directives, the Z 8 T carries CE conformity, supporting safe and compliant operation in modern beverage production facilities.

- CE conformity marking
- Operator protections consistent with category standards
- Emergency stop and protective guarding typical for capsuling machines
