

7C – Brother / JAM TC 762 F Automated Pocket Setter Workstation – Complete Unit

Description:

For sale is a high-performance Brother automated sewing unit equipped with a JAM TC 762 F automation module, offered as a complete industrial workstation.

This system is specifically designed for automated pocket setting and precision sewing operations, making it highly suitable for denim, trousers, and workwear production. The integrated automation module enables accurate material positioning, clamping, and repeatable stitching cycles with minimal operator input.

The unit combines a heavy-duty Brother sewing head with JAM International automation technology, delivering consistent production quality and significantly improved efficiency compared to manual processes.

The machine has been used in a professional garment factory environment and was fully operational until factory shutdown. The unit has also been video recorded in full working condition on 05.03.2026.

Key advantages:

- Automated pocket setting and J-stitching
- High repeatability and production consistency
- Reduced labor dependency
- Suitable for continuous industrial production
- Complete workstation ready for integration
- Production Capacity: Approximately 2,600 pockets per 8-hour shift.
- Maximum Speed: Operates at up to 3,600 RPM.
- Quick-Change System: Features a pneumatic mold change system, allowing for fast transitions between different pocket sizes and styles.
- Versatile Operation: Capable of both semi-automatic and fully automatic modes, handling both pre-ironed and unironed pockets.

Includes:

- Brother automated sewing machine head
- JAM TC 762 F automation module (material handling and positioning)
- Electronic control system (TC 762 interface)
- External PC workstation (monitor, keyboard, control unit)
- Pneumatic system with regulators
- Dual foot pedal controls
- Industrial table and heavy-duty frame
- Safety guards and integrated lighting
- Fabric support and output handling system

Technical details:

- Manufacturer: Brother Industries, Ltd. (Japan)
- Automation module: JAM International TC 762 F (Italy)
- Type: Programmable automated sewing workstation
- Power: 220V
- Pneumatic system required
- Integrated control and external PC operation

Condition:

- Used industrial condition
- Fully operational prior to factory shutdown
- Video recorded in operation (01.04.2026)
- Maintained and serviced, latest maintenance 27.02.2026
- Typical signs of use consistent with production environment
- Sold as-is, where-is, without warranty

Typical applications:

- Automated pocket setting
- Denim and trouser production
- Workwear manufacturing
- Reinforcement stitching
- Repetitive precision sewing operations

Location:

Valga, Estonia

Removal & transport:

Buyer responsible for dismantling and transport
