

Helmut Fischer GmbH - Fischerscope H100c XY p

Year of manufacture: 2001

Condition: ready for use, used

Functionality: fully functional

Price: € 2.990,00 plus VAT and delivery

For sale is a Fischerscope H100C XYp micro-/nano-hardness testing system from Helmut Fischer, year of manufacture 2001.

The device was last used in a laboratory. However, it is currently not fully functional and is therefore expressly sold as defective / for repair / for spare parts.

Known issues:

- The table feed movement does not function correctly. The table is positioned under the measuring head, not under the microscope, so targeted measurements are currently not possible. Presumably an electronic issue.
- The measuring table moves to the left by itself, possibly due to a joystick fault.
- Indenter change does not function correctly; the probe does not move fully to the stop position.

The device is therefore particularly suitable for:

- Repair by someone with electronics expertise
- Spare parts recovery
- Research / hobbyist use

Visual condition is good for its age.
