DESCRIPTION

This vertical spiral conveyor consists of a conveyor belt that rotates around a centre. It can be used for vertical transport of a wide range of products, to create an efficient production line or to simplify order picking for large operations. By using a vertical spiral conveyor, valuable space savings are achieved, as products will be transported across the height rather than lengthwise. The single lane spiral conveyor system uses one lane for material handling.

Loading height: 0.90 m

Unloading height: 3.30 m
