DESCRIPTION

The automatic filling machine is a new generation volumetric filling equipment, suitable for filling liquids and viscous liquids into bottles and jars. The whole machine has a linear structure and is driven by a servomotor system.

- High precision volumetric filling.
- The volume regulation is done from the touch screen of the machine.

This type of machine is suitable for dosing the following products: mustards, baby food, sauces, pastes, jams, liquid soya, etc.

The output varies according to the product, format and filling capacity.
