

VG

EDGE MASTER

Fast and precise deburring and edge rounding of cut sheet metal.

Economical, with a focus on essential features and a working width of 1060 mm.

EDGE MASTER

Entry-level without compromise

A budget-friendly entry model, yet equipped with all necessary features. With a working width of 1060 mm, the machine combines deburring, edge rounding, and laser oxide removal in a single pass.

Multiple operations in one passage

All in one operation
for time-saving
and efficiency

Edge rounding

Laser oxide removal

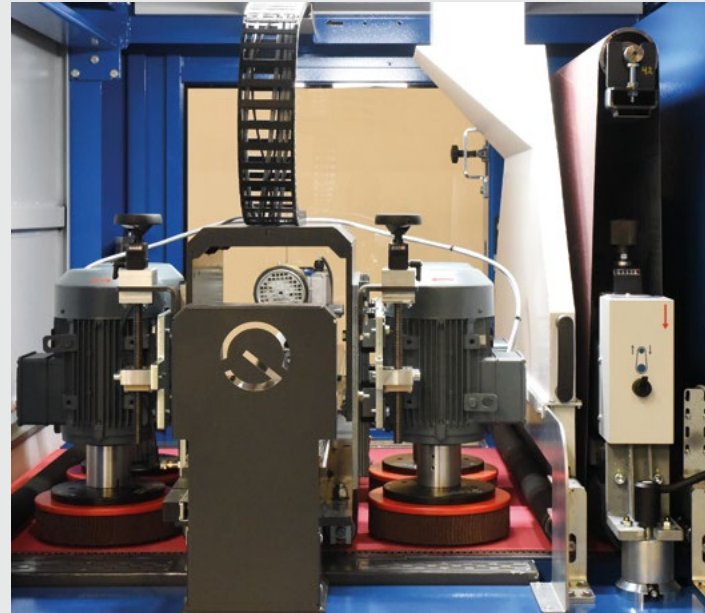

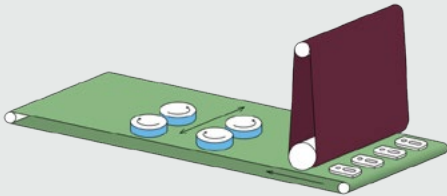

Deburring

Controlled roughness

Polishing

Finishing - straight grain finish

Grinding unit

Targeted grinding of hard burrs without damaging the workpiece surface. Manual depth and pressure control ensure optimal processing.

Quick and easy grinding belt change.

Top brush system

Pendulum unit with two rows of top brushes for uniform rounding of all edges and inner contours. More effective contact with the contours thanks to a pendulum stroke across the entire working width.

Speed and pressure adjustable per brush row.

Option for different brush combinations (2+2).

Controls

Intuitive touchscreen controls for the grinding belt, top brushes, pendulum motion, and conveyor belt, with separate speed control for each function and the ability to save work programs.

FEATURES	EDGE MASTER
Working width	1060 mm
Motorised height adjustment	0,5 - 150 mm
Conveyor belt speed	0,5 - 6 m/min.
Grinding belt dimensions	1060 X 1900 mm
Diameter top brushes	250 mm
Dimensions	2640 X 1905 X 2040 mm

MADE IN BELGIUM

VG Machines develops and builds deburring machines based on decades of expertise in deburring and finishing cut sheet metal parts.

Designed and manufactured in Belgium since 1950.

Personal service, technical training, and our own expertise center form the foundation of our approach.

Our focus is on technology, innovation, and ergonomics.

Discover how a well-engineered deburring machine pays for itself. We are happy to discuss your application together.
