

Tonello Mini Destoner – Industrial Garment Stone Removal Unit

Industrial Stone Separation System for Denim & Garment Finishing Lines

The Tonello Mini Destoner is a professional industrial stone-removal unit manufactured by Tonello S.r.l., Italy. The machine is designed to efficiently separate pumice stones from garments after the stone-washing process, protecting downstream equipment while reducing manual handling and improving production efficiency.

Integrated into professional garment finishing lines, the Mini Destoner allows garments to tumble inside a rotating stainless steel drum while pumice stones pass through the perforated separator and are collected in a dedicated container below.

This unit was previously part of the MASI JEANS industrial denim finishing line and is suitable for integration with Tonello and other industrial garment washing systems.

Technical Specifications

- Manufacturer: Tonello S.r.l.
- Model: Mini Destoner
- Machine Type: Industrial Garment Stone Removal Unit
- Application: Automatic separation of pumice stones after garment stone washing
- Machine Compatibility: Tonello G1 330 HS and other Tonello industrial garment washing machines
- Internal Reference: K344
- Country of Manufacture: Italy
- Construction: Stainless steel rotating drum mounted on heavy-duty steel frame
- Drum Protection: Perforated conical safety separator
- Electrical Supply: Typically 400 V, 3-Phase, 50 Hz (to be verified during inspection)

Key Features

- Designed specifically for post stone-wash garment processing
- Efficient separation of garments and pumice stones
- Stainless steel rotating drum
- Heavy-duty perforated separator cage
- Integrated stone discharge chute
- Mobile industrial steel frame with locking caster wheels
- Operator control panel
- Heavy-duty industrial construction
- Suitable for continuous production environments

Includes

- Tonello Mini Destoner unit
- Stainless steel rotating drum
- Steel support frame
- Perforated separator cage
- Stone discharge chute
- Operator control panel

- Collection container
- Industrial transport crate

Applications

- Denim stone washing
- Garment finishing
- Pumice stone removal
- Industrial laundry operations
- Textile wet processing
- Denim manufacturing
- Industrial garment production

Condition

- Previously used in professional denim production
- Good industrial condition
- Structurally complete
- Includes all major mechanical assemblies
- Normal cosmetic wear consistent with factory use
- Available for inspection before dismantling

Location

Valga, Estonia

Dismantling & Transport

Buyer is responsible for disconnecting, dismantling, loading, transportation, and all related costs.

Professional handling is recommended due to the industrial construction of the equipment.

Sales Terms

Sold as-is, where-is, without warranty.

Part of the MASI JEANS factory liquidation.

The machine is available individually or together with the complete Tonello industrial washing and finishing line.
